

Student Research Worksheet

Name:	
Country:	
Local Community:	
Research Questions	Student Notes
Are there any policies in your country to encourage sustainable water consumption?	
What is waste water recycling?	
What continent faces the most water insecurity?	
What is the current state of water pollution in your country?	
What industry uses the largest amount of water in your country?	
What is the largest source of freshwater in your country?	

<p>What is the average water footprint in your country?</p>	
<p>Describe water allocation in your country. Is there any area in your country or community impacted by safe water scarcity? Who is the most vulnerable to contaminated water or lack of water?</p>	
<p>Where does your wastewater go? If possible, how is wastewater collected and treated in your country?</p>	
<p>How common are water-borne diseases in your country? If it is common, how is your country tackling this issue? How could you spread awareness or inform others of these diseases?</p>	

School Investigation Worksheet

Investigate!	Notes and Observations
Do you have water fountains in the school or on the school grounds? How many?	
Do you have water filters in your school or a school-wide water filtration system? How many water filters are there?	
According to the Water Quality Index Calculator, what is the safety score for the drinking water supplied in your school? Is this acceptable?	
In your opinion, do students practice handwashing in school? How often?	
In your opinion, do all students know about the importance of handwashing?	
What is the water footprint for an individual in your school or your school as a whole?	

<p>Does your school have water scarcity information available and on display?</p>	
<p>Is clean water available at school? If so, what kind of water supply is available at your school? Where does the water come from?</p>	
<p>Are the general water consumption practices of students at your school sustainable?</p>	
<p>Do students waste the water? If they do, what proportion of water do they waste?</p>	
<p>Does your school have any programs on water pollution and water scarcity?</p>	
<p>Given all these questions and notes above, what is the biggest problem in your school? How can you help your school community in this area? Write down your ideas here:</p>	

Action Planning Template (For Students)

Describe your idea or action.

Where will you implement your action? Your school, classroom, or local community?

What is your #1 goal in completing this action? How many people do you want to reach? What exactly will you accomplish?

What do you know about this topic? Use research, facts, and statistics you gathered.

What are your next steps for completing this action?
